i have been a Software Engineer for 3 yrs now and i love Technology.. I usually spend my time thinking how to used the available resources and technology to better the way we live, so each time am on my keyboard coding I always bear in mind that am coding to solve a problem and not to impress an audience cause solving a problem is what makes the difference, i have one big question that i always ask myself and that is "How can we Make it better?". I have worked on plenty of projects from small projects in church to big team projects. I don't see myself as the best developer in the World but rather i see myself as good at what i do and I love developing solutions for enhancing repetitive task and increasing productivity with upmost quality and always curious to learn more..
